**Fig. 1: Burghausen** – Salzach river valley alluvium is left as it is as an ideal hatching place

**Fig. 2: Schlangenbad** – a vegetation strip along Klosterbach monastery peripheral wall is preserved as a safe shelter for snakes and is mowed as late as in October

**Fig. 3: *Schlangenbad*** – a strip of higher vegetation is preserved close to the walls that is mowed as late as in October

**Fig. 4: *Schlangenbad*** – so called snakes' pathway with information boards for education of residents and tourists

**Fig. 5: *Hirschhorn*** – landlords create optimal snake habitats – heaps of cut logs covered by boards and foils

**Fig. 6: *Hirschhorn*** – gardening waste is collected at a Central dump serving as a hatching place for snakes
